

Assignment 02

You may work with a teammate, but your individual contribution should be clearly documented in the README and reflected in Git history.

Grading Breakdown

- **Game Process Understanding and Core Gameplay Integration — 25%**
 - Understand the overall game flow, including start menu, level selection, gameplay, game over, and player status.
 - Help integrate or test core gameplay systems where possible.
 - Demonstrate understanding of player life, score, timer, enemy behavior, question blocks, and game state changes.
 - You are not expected to be primarily responsible for visual-heavy work such as detailed map design, animation polish, or appearance tuning.
- **Firebase / Deployment — 15%**
 - Deploy the project successfully to Firebase.
 - Ensure the deployed page works correctly.
- **Authentication and Save/Restore — 15%**
 - Implement Firebase signup, login, and logout if possible.
 - Save and restore player progress, game state, or user-related data.
- **Leaderboard / Score Persistence — 10%**
 - Store player scores using Firebase or another backend system.
 - Display a leaderboard in the game or on a related page.
 - Support score sorting, user identity, timestamps, or other useful leaderboard details.
- **Multiplayer / Backend Feature — 10%**
 - Implement an online multiplayer.
 - Possible examples include shared game state, room creation, player matching, synchronized scores, or a simple backend API.
 - The feature should be documented clearly, including what works and what limitations remain.
- **Accessibility Contribution — 10%**
 - Improve accessibility where possible.
 - Possible examples include keyboard-only navigation, clearer menu flow, audio cues, readable UI states, screen-reader-friendly labels, or accessibility testing notes.

- Document what accessibility improvements were attempted or completed.
- **Git / Version Control — 5%**
 - Make regular and meaningful commits.
 - Help with merging, issue tracking, or version control organization if applicable.
- **README / Technical Documentation — 10%**
 - Clearly describe your individual contribution.
 - List the features you completed or helped complete.

Notes

- Your grading will focus more on backend, deployment, integration, accessibility, documentation, and engineering contribution.
- Visual-heavy tasks such as appearance, animation polish, and detailed level design will carry reduced weight for you.
- You should still understand the overall game structure and how your work connects to the final project.
- Your teammate will be graded using the regular rubric unless a separate adjustment is approved.
